

Build Tools 2

COMS10012 Software Tools

Python

package manager: **pip**

```
$ pip install mistletoe
```

environment manager: **v(irtual)env**

distribution: **conda**

```
$ conda install numpy
```

golang

```
$ go get github.com/joho/godotenv
```

Package manager, but decentralised: packages can just be loaded from URLs.

Java classpath

\$ java -cp [list of JARs] MAINCLASS

Java / Maven

Repository: `mvnrepository.org`

```
<dependency>  
  <groupId>org.mariadb.jdbc</groupId>  
  <artifactId>mariadb-java-client</artifactId>  
  <version>2.7.2</version>  
</dependency>
```

Maven

- Everything is an **artifact** with (groupId, artifactId, version).
- Artifacts can be hosted in repositories, see <https://mvnrepository.org>
- artifacts can have dependencies, maven resolves these (recursively)
- everything is downloaded to a cache (~/.m2/repository)

Maven

project folder: contains **pom.xml**

folder structure:

pom.xml

exec plugin

```
<build>
  <plugins>
    <plugin>
      <groupId>org.codehaus.mojo</groupId>
      <artifactId>exec-maven-plugin</artifactId>
      <version>3.0.0</version>
      <configuration>
        <mainClass>org.example.Example</mainClass>
      </configuration>
    </plugin>
```

Maven

```
mvn archetype:generate
```

```
mvn compile
```

```
mvn clean
```

```
mvn test
```

```
mvn package
```

```
mvn exec:java
```
